Chapter 1

Namespace Index

1.1 Namespace List

Here is a list of all documented namespaces with brief descriptions:

FACamera		
Has Camera class	7
FARender		
Has classes that are used for rendering objects and text through the Direct3D 12 API	7
FAWindow		
Has Window class	8

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

[FACamera::Camera](#)

Simple first person style camera class that lets the viewer explore the 3D scene. It keeps track of the camera coordinate system relative to the world space so that the view matrix can be constructed.

It keeps track of the viewing frustum of the camera so that the projection matrix can be obtained.

9

[FAColor::Color](#)

This class stores a RGBA color in a 4D vector using floats. The range of each component is [0.0, 1.0]. The first componet is red, second component is green, third component is blue and the 4th component is alpha 18

[FARender::ConstantBuffer](#)

This class stores constant data in a Direct3D 12 upload buffer 22

[FARender::DepthStencilBuffer](#)

A wrapper for depth stencil buffer resources. Uses DirectD 12 API 24

[FARender::DeviceResources](#)

A wrapper for resources that are needed to render objects and text using the Direct3D 12 API . 26

[DirectXException](#)

. 31

[FARender::DrawSettings](#)

Holds a array of objects that use the same PSO, root signature and primitive 32

[FARender::IndexBuffer](#)

This class stores indices in a Direct3D 12 default buffer 32

[FARender::MultiSampling](#)

A wrapper for multisampling resources. Uses DirectD 12 API 33

[FARender::RenderScene](#)

This class is used to render a scene using Direct3D 12 API 36

[FARender::RenderTargetBuffer](#)

A wrapper for render target buffer resources. Uses DirectD 12 API 46

[FARender::SwapChain](#)

A wrapper for swap chain resources. Uses DirectD 12 API and DXGI API 48

[FARender::Text](#)

This class is used to help render text. Stores the location of the text, the text string, text size and the color of the text 53

[FARender::TextResources](#)

A wrapper for resources that are needed to render text using Direct3D 11on12, Direct2D and DirectWrite 55

[FATime::Time](#) 57[Time](#)

This class is used to get the time between each frame. You can stop start, reset and get the total time 59

[FARender::VertexBuffer](#)

This class stores vertices in a Direct3D 12 default buffer 59

[FAWindow::Window](#)

The window class is used to make a [Window](#) using Windows API 60

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

Direct3DLink.h	??
FABuffer.h	
File has classes VertexBuffer, IndexBuffer and ConstantBuffer under namespace FARender	63
FACamera.h	
File that has namespace FACamera . Withn the namespace is the class Camera	65
FAColor.h	
File has class Color under namespace FAColor	68
FADeviceResources.h	
File has class DeviceResources under namespace FARender	70
FADirectXException.h	??
FAMultiSampling.h	??
FARenderScene.h	
File has class RenderScene under namespace FARender	74
FASwapChain.h	??
FAText.h	
File has class Text under namespace FARender	78
FATextResources.h	??
FATime.h	
File that has namespace FATime . Withn the namespace is the class Time	80
FAWindow.h	
File that has namespace FAWindow . Withn the namespace is the class Window	81

Chapter 4

Namespace Documentation

4.1 FACamera Namespace Reference

Has [Camera](#) class.

Classes

- class [Camera](#)

Simple first person style camera class that lets the viewer explore the 3D scene.

It keeps track of the camera coordinate system relative to the world space so that the view matrix can be constructed.

It keeps track of the viewing frustum of the camera so that the projection matrix can be obtained.

.

4.1.1 Detailed Description

Has [Camera](#) class.

4.2 FARender Namespace Reference

Has classes that are used for rendering objects and text through the Direct3D 12 API.

Classes

- class [ConstantBuffer](#)

This class stores constant data in a Direct3D 12 upload buffer.

- class [DepthStencilBuffer](#)

A wrapper for depth stencil buffer resources. Uses DirectD 12 API.

- class [DeviceResources](#)

A wrapper for resources that are needed to render objects and text using the Direct3D 12 API.

- struct [DrawSettings](#)

Holds a array of objects that use the same PSO, root signature and primitive.

- class [IndexBuffer](#)
This class stores indices in a Direct3D 12 default buffer.
- class [MultiSampling](#)
A wrapper for multisampling resources. Uses DirectD 12 API.
- class [RenderScene](#)
This class is used to render a scene using Direct3D 12 API.
- class [RenderTargetBuffer](#)
A wrapper for render target buffer resources. Uses DirectD 12 API.
- class [SwapChain](#)
A wrapper for swap chain resources. Uses DirectD 12 API and DXGI API.
- class [Text](#)
This class is used to help render text. Stores the location of the text, the text string, text size and the color of the text.
- class [TextResources](#)
A wrapper for resources that are needed to render text using Direct3D 11on12, Direct2D and DirectWrite.
- class [VertexBuffer](#)
This class stores vertices in a Direct3D 12 default buffer.

4.2.1 Detailed Description

Has classes that are used for rendering objects and text through the Direct3D 12 API.

4.3 FAWindow Namespace Reference

Has [Window](#) class.

Classes

- class [Window](#)
The window class is used to make a [Window](#) using Windows API.

4.3.1 Detailed Description

Has [Window](#) class.

Chapter 5

Class Documentation

5.1 FACamera::Camera Class Reference

Simple first person style camera class that lets the viewer explore the 3D scene.

It keeps track of the camera coordinate system relative to the world space so that the view matrix can be constructed.

It keeps track of the viewing frustum of the camera so that the projection matrix can be obtained.

```
#include "FACamera.h"
```

Public Member Functions

- [Camera](#) (vec3 cameraPosition=vec3(0.0f, 0.0f, 0.0f), vec3 x=vec3(1.0f, 0.0f, 0.0f), vec3 y=vec3(0.0f, 1.0f, 0.0f), vec3 z=vec3(0.0f, 0.0f, 1.0f), float znear=1.0f, float zfar=100.f, float aspectRatio=1.0f, float vFov=45.0f, float cameraVelocity=10.0f, float angularVelocity=0.25f)
Constructor.
- const vec3 & [GetCameraPosition](#) () const
Returns a constant reference to the position of the camera in world coordinates.
- const vec3 & [GetX](#) () const
Returns a constant reference to the x-axis of the camera.
- const vec3 & [GetY](#) () const
Returns a constant reference to the y-axis of the camera.
- const vec3 & [GetZ](#) () const
Returns a constant reference to the z-axis of the camera.
- const mat4 & [GetViewTransformationMatrix](#) () const
Returns a constant reference to the view transformation matrix of this camera.
- float [GetCameraVelocity](#) () const
Returns the camera's velocity.
- float [GetAngularVelocity](#) () const
Returns the camera's angular velocity.
- void [LookAt](#) (vec3 cameraPosition, vec3 target, vec3 up)
Defines the camera space using UVN.
- float [GetZNear](#) () const
Returns the near value of the frustum.
- float [GetZFar](#) () const

- Returns the far value of the frustrum.*

 - float [GetVerticalFov](#) () const

Returns the vertical field of view of the frustrum in degrees.
- float [GetAspectRatio](#) () const

Returns the aspect ratio of the frustrum.
- void [SetCameraPosition](#) (const vec3 &position)

Sets the camera's position to the specified position.
- void [SetX](#) (const vec3 &x)

Sets the camera's x-axis to the specified vector.
- void [SetY](#) (const vec3 &y)

Sets the camera's y-axis to the specified vector.
- void [SetZ](#) (const vec3 &z)

Sets the camera's z-axis to the specified vector.
- void [SetCameraVelocity](#) (float velocity)

Sets the camera's velocity to the specified velocity.
- void [SetAngularVelocity](#) (float velocity)

Sets the camera's angular velocity to the specified angular velocity.
- void [SetZNear](#) (float znear)

Sets the camera's near plane z value to the specified value.
- void [SetZFar](#) (float zfar)

Sets the camera's far plane z value to the specified value.
- void [SetVerticalFov](#) (float fov)

Sets the camera's vertical field of view to the specified vertical field of view .
- void [SetAspectRatio](#) (float ar)

Sets the camera's aspect ratio to the specified aspect ratio.
- const mat4 & [GetPerspectiveProjectionMatrix](#) () const

Returns a constant reference to the perspective projection transformation matrix of this camera.
- const mat4 & [GetViewPerspectiveProjectionMatrix](#) () const

Returns a constant reference to the view perspective projection transformation matrix of this camera.
- void [UpdateViewMatrix](#) ()

After modifying the camera position and/or orientation, call this to rebuild the view transformation matrix.
- void [UpdatePerspectiveProjectionMatrix](#) ()

After modifying any of the frustrum properties, call this to rebuild the perspective projection transformation matrix.
- void [UpdateViewPerspectiveProjectionMatrix](#) ()

After modifying view and/or perspective projection transformation matrix, call this to rebuild the view perspective projection transformation matrix.
- void [Left](#) (float dt)

Moves the camera left along the camera's x-axis.
- void [Right](#) (float dt)

Moves the camera right along the camera's x-axis.
- void [Forward](#) (float dt)

Moves the camera forward along the camera's z-axis.
- void [Backward](#) (float dt)

Moves the camera backward along the camera's z-axis.
- void [Up](#) (float dt)

Moves the camera up along the camera's y-axis.
- void [Down](#) (float dt)

Moves the camera down along the camera's y-axis.
- void [RotateCameraLeftRight](#) (float xDiff)

Rotates the camera to look left and right.
- void [RotateCameraUpDown](#) (float yDiff)

Rotates the camera to look up and down.

- void [KeyboardInput](#) (float dt)

Polls keyboard input and moves the camera. Moves the camera forward/backward if w/s or up/down arrow was pressed. Moves the camera left/right if a/d or left/right arrow was pressed. Moves the camera up/down if space/crtl was pressed.

- void [MouseInput](#) ()

Rotates camera on mouse movement.

5.1.1 Detailed Description

Simple first person style camera class that lets the viewer explore the 3D scene.

It keeps track of the camera coordinate system relative to the world space so that the view matrix can be constructed.

It keeps track of the viewing frustum of the camera so that the projection matrix can be obtained.

5.1.2 Constructor & Destructor Documentation

5.1.2.1 Camera()

```
FACamera::Camera::Camera (
    vec3 cameraPosition = vec3(0.0f, 0.0f, 0.0f),
    vec3 x = vec3(1.0f, 0.0f, 0.0f),
    vec3 y = vec3(0.0f, 1.0f, 0.0f),
    vec3 z = vec3(0.0f, 0.0f, 1.0f),
    float znear = 1.0f,
    float zfar = 100.f,
    float aspectRatio = 1.0f,
    float vFov = 45.0f,
    float cameraVelocity = 10.0f,
    float angularVelocity = 0.25f )
```

Constructor.

Creates a new camera.

Sets the origin of the camera space to the given cameraPosition.

Sets the axis of the camera space to the given x, y and z vectors.

The origin and basis vectors of the camera space should be relative to world space.

Sets the frustum properties for perspective projection to the given znear, zar, aspectRatio and fov values.

vFov should be in degrees.

The constant velocity of the camera when moved is set to the given cameraVelocity; The angular velocity of the camera is set the to specified angularVelocity.

5.1.3 Member Function Documentation

5.1.3.1 Backward()

```
void FACamera::Camera::Backward (
    float dt )
```

Moves the camera backward along the camera's z-axis.

5.1.3.2 Down()

```
void FACamera::Camera::Down (
    float dt )
```

Moves the camera down along the camera's y-axis.

5.1.3.3 Foward()

```
void FACamera::Camera::Foward (
    float dt )
```

Moves the camera foward along the camera's z-axis.

5.1.3.4 GetAngularVelocity()

```
float FACamera::Camera::GetAngularVelocity ( ) const
```

Returns the camera's angular velocity.

5.1.3.5 GetAspectRatio()

```
float FACamera::Camera::GetAspectRatio ( ) const
```

Returns the aspect ratio of the frustum.

5.1.3.6 GetCameraPosition()

```
const vec3 & FACamera::Camera::GetCameraPosition ( ) const
```

Returns a constant reference to the position of the camera in world coordinates.

5.1.3.7 GetCameraVelocity()

```
float FACamera::Camera::GetCameraVelocity ( ) const
```

Returns the camera's velocity.

5.1.3.8 GetPerspectiveProjectionMatrix()

```
const mat4 & FACamera::Camera::GetPerspectiveProjectionMatrix ( ) const
```

Returns a constant reference to the perspective projection transformation matrix of this camera.

5.1.3.9 GetVerticalFov()

```
float FACamera::Camera::GetVerticalFov ( ) const
```

Returns the vertical field of view of the frustum in degrees.

5.1.3.10 GetViewPerspectiveProjectionMatrix()

```
const mat4 & FACamera::Camera::GetViewPerspectiveProjectionMatrix ( ) const
```

Returns a constant reference to the view perspective projection transformation matrix of this camera.

5.1.3.11 GetViewTransformationMatrix()

```
const mat4 & FACamera::Camera::GetViewTransformationMatrix ( ) const
```

Returns a constant reference to the view transformation matrix of this camera.

5.1.3.12 GetX()

```
const vec3 & FACamera::Camera::GetX ( ) const
```

Returns a constant reference to the x-axis of the camera.

5.1.3.13 GetY()

```
const vec3 & FACamera::Camera::GetY ( ) const
```

Returns a constant reference to the y-axis of the camera.

5.1.3.14 GetZ()

```
const vec3 & FACamera::Camera::GetZ ( ) const
```

Returns a constant reference to the z-axis of the camera.

5.1.3.15 GetZFar()

```
float FACamera::Camera::GetZFar ( ) const
```

Returns the far value of the frustum.

5.1.3.16 GetZNear()

```
float FACamera::Camera::GetZNear ( ) const
```

Returns the near value of the frustum.

5.1.3.17 KeyboardInput()

```
void FACamera::Camera::KeyboardInput (
    float dt )
```

Polls keyboard input and moves the camera. Moves the camera forward/backward if w/s or up/down arrow was pressed. Moves the camera left/right if a/d or left/right arrow was pressed. Moves the camera up/down if space/crtl was pressed.

5.1.3.18 Left()

```
void FACamera::Camera::Left (
    float dt )
```

Moves the camera left along the camera's x-axis.

5.1.3.19 LookAt()

```
void FACamera::Camera::LookAt (
    vec3 cameraPosition,
    vec3 target,
    vec3 up )
```

Defines the camera space using UVN.

5.1.3.20 MouseInput()

```
void FACamera::Camera::MouseInput ( )
```

Rotates camera on mouse movement.

5.1.3.21 Right()

```
void FACamera::Camera::Right (
    float dt )
```

Moves the camera right along the camera's x-axis.

5.1.3.22 RotateCameraLeftRight()

```
void FACamera::Camera::RotateCameraLeftRight (
    float xDiff )
```

Rotates the camera to look left and right.

5.1.3.23 RotateCameraUpDown()

```
void FACamera::Camera::RotateCameraUpDown (
    float yDiff )
```

Rotates the camera to look up and down.

5.1.3.24 SetAngularVelocity()

```
void FACamera::Camera::SetAngularVelocity (
    float velcoity )
```

Sets the camera's angular velocity to the specified angular velocity.

5.1.3.25 SetAspectRatio()

```
void FACamera::Camera::SetAspectRatio (
    float ar )
```

Sets the camera's aspect ratio to the specified aspect ratio.

5.1.3.26 SetCameraPosition()

```
void FACamera::Camera::SetCameraPosition (
    const vec3 & position )
```

Sets the camera's position to the specified position.

5.1.3.27 SetCameraVelocity()

```
void FACamera::Camera::SetCameraVelocity (
    float velocity )
```

Sets the camera's velocity to the specified velocity.

5.1.3.28 SetVerticalFov()

```
void FACamera::Camera::SetVerticalFov (
    float fov )
```

Sets the camera's vertical field of view to the specified vertical field of view .

5.1.3.29 SetX()

```
void FACamera::Camera::SetX (
    const vec3 & x )
```

Sets the camera's x-axis to the specified vector.

5.1.3.30 SetY()

```
void FACamera::Camera::SetY (
    const vec3 & y )
```

Sets the camera's y-axis to the specified vector.

5.1.3.31 SetZ()

```
void FACamera::Camera::SetZ (
    const vec3 & z )
```

Sets the camera's z-axis to the specified vector.

5.1.3.32 SetZFar()

```
void FACamera::Camera::SetZFar (
    float zfar )
```

Sets the camera's far plane z value to the specified value.

5.1.3.33 SetZNear()

```
void FACamera::Camera::SetZNear (
    float znear )
```

Sets the camera's near plane z value to the specified value.

5.1.3.34 Up()

```
void FACamera::Camera::Up (
    float dt )
```

Moves the camera up along the camera's y-axis.

5.1.3.35 UpdatePerspectiveProjectionMatrix()

```
void FACamera::Camera::UpdatePerspectiveProjectionMatrix ( )
```

After modifying any of the frustrum properties, call this to rebuild the perspective projection transformation matrix.

5.1.3.36 UpdateViewMatrix()

```
void FACamera::Camera::UpdateViewMatrix ( )
```

After modifying the camera position and/or orientation, call this to rebuild the view transformation matrix.

5.1.3.37 UpdateViewPerspectiveProjectionMatrix()

```
void FACamera::Camera::UpdateViewPerspectiveProjectionMatrix ( )
```

After modifying view and/or perspective projection transformation matrix, call this to rebuild the view perspective projection transformation matrix.

The documentation for this class was generated from the following file:

- [FACamera.h](#)

5.2 FAColor::Color Class Reference

This class stores a RGBA color in a 4D vector using floats. The range of each component is [0.0, 1.0]. The first componet is red, second component is green, third component is blue and the 4th component is alpha.

```
#include "FAColor.h"
```

Public Member Functions

- [Color](#) (float r=0.0f, float g=0.0f, float b=0.0f, float a=1.0f)
Default Constructor. Initializes the color to the specified RGBA values.
- [Color](#) (const FAMath::Vector4D &color)
Overloaded Constructor. Initializes the color to the specified color.
- const FAMath::Vector4D & [GetColor](#) () const
Returns the color.
- float [GetRed](#) () const
Returns the value of the red component.
- float [GetGreen](#) () const
Returns the value of the blue component.
- float [GetBlue](#) () const
Returns the value of the green component.
- float [GetAlpha](#) () const
Returns the value of the alpha component.
- void [SetColor](#) (const FAMath::Vector4D &color)
Sets the color to the specified color.
- void [SetRed](#) (float r)
Sets the red component to the specified float value.
- void [SetGreen](#) (float g)
Sets the green component to the specified float value.
- void [SetBlue](#) (float b)

- Sets the blue component to the specified float value.*

 - void **SetAlpha** (float a)

Sets the alpha component to the specified float value.
 - **Color** & **operator+=** (const **Color** &c)

Adds this objects color to the specified color and stores the result in this object. Does component-wise addition. If any of the resultant components are > 1.0f, they are set to 1.0f.
 - **Color** & **operator-=** (const **Color** &c)

Subtracts the specified color from this objects color and stores the result in this object. Does component-wise subtraction. If any of the resultant components are < 0.0f, they are set to 0.0f.
 - **Color** & **operator*=** (float k)

Multiplies this objects color by the specified float value k and stores the result in this object. If k < 0.0f, no multiplication happens and this objects color does not get modified. If any of the resultant components are > 1.0f, they are set to 1.0f.
 - **Color** & **operator*=** (const **Color** &c)

Multiplies this objects color by the specified color c and stores the result in this object. If any of the resultant components are > 1.0f, they are set to 1.0f. Does component-wise multiplication.

5.2.1 Detailed Description

This class stores a RGBA color in a 4D vector using floats. The range of each component is [0.0, 1.0]. The first componet is red, second component is green, third component is blue and the 4th component is alpha.

5.2.2 Constructor & Destructor Documentation

5.2.2.1 Color() [1/2]

```
FColor::Color::Color (
    float r = 0.0f,
    float g = 0.0f,
    float b = 0.0f,
    float a = 1.0f )
```

Default Constructor. Initializes the color to the specified RGBA values.

5.2.2.2 Color() [2/2]

```
FColor::Color::Color (
    const FMath::Vector4D & color )
```

Overloaded Constructor. Initializes the color to the specified color.

5.2.3 Member Function Documentation

5.2.3.1 GetAlpha()

```
float FColor::Color::GetAlpha ( ) const
```

Returns the value of the alpha component.

5.2.3.2 GetBlue()

```
float FColor::Color::GetBlue ( ) const
```

Returns the value of the green component.

5.2.3.3 GetColor()

```
const FMath::Vector4D & FColor::Color::GetColor ( ) const
```

Returns the color.

5.2.3.4 GetGreen()

```
float FColor::Color::GetGreen ( ) const
```

Returns the value of the blue component.

5.2.3.5 GetRed()

```
float FColor::Color::GetRed ( ) const
```

Returns the value of the red component.

5.2.3.6 operator*=() [1/2]

```
Color & FColor::Color::operator*= (
    const Color & c )
```

Multiplies this objects color by the specified color c and stores the result in this object. If any of the resultant components are $> 1.0f$, they are set to $1.0f$. Does component-wise multiplication.

5.2.3.7 operator*=() [2/2]

```
Color & FColor::Color::operator*= (
    float k )
```

Multiplies this objects color by the specified float value k and stores the result in this object. If $k < 0.0f$, no multiplication happens and this objects color does not get modified. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.

.

5.2.3.8 operator+=()

```
Color & FColor::Color::operator+= (
    const Color & c )
```

Adds this objects color to the specified color and stores the result in this object. Does component-wise addition. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.

5.2.3.9 operator-=()

```
Color & FColor::Color::operator-= (
    const Color & c )
```

Subtracts the specified color from this objects color and stores the result in this object. Does component-wise subtraction. If any of the resultant components are $< 0.0f$, they are set to $0.0f$.

5.2.3.10 SetAlpha()

```
void FColor::Color::SetAlpha (
    float a )
```

Sets the alpha component to the specified float value.

5.2.3.11 SetBlue()

```
void FColor::Color::SetBlue (
    float b )
```

Sets the blue component to the specified float value.

5.2.3.12 SetColor()

```
void FColor::Color::SetColor (
    const FAMath::Vector4D & color )
```

Sets the color to the specified color.

5.2.3.13 SetGreen()

```
void FColor::Color::SetGreen (
    float g )
```

Sets the green component to the specified float value.

5.2.3.14 SetRed()

```
void FColor::Color::SetRed (
    float r )
```

Sets the red component to the specified float value.

5.3 FRender::ConstantBuffer Class Reference

This class stores constant data in a Direct3D 12 upload buffer.

```
#include "FABuffer.h"
```

Public Member Functions

- **ConstantBuffer** (const [ConstantBuffer](#) &)=delete
- **ConstantBuffer & operator=** (const [ConstantBuffer](#) &)=delete
- **~ConstantBuffer** ()
Unmaps the pointer to the constant buffer.
- void **CreateConstantBuffer** (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const UINT &numOfBytes)
Creates and maps the constant buffer. The number of bytes allocated should be a multiple of 256 bytes.
- void **CreateConstantBufferView** (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &cbvHeap, UINT cbvSize, UINT cBufferIndex, UINT cbvHeapIndex, UINT numBytes)
Creates and maps the constant buffer view and stores it in the specified descriptor heap.
- void **CopyData** (UINT index, UINT byteSize, const void *data, UINT64 numBytes)
Copies data from the given data into the constant buffer. Uses 0-indexing.

5.3.1 Detailed Description

This class stores constant data in a Direct3D 12 upload buffer.

5.3.2 Constructor & Destructor Documentation

5.3.2.1 ~ConstantBuffer()

```
FARender::ConstantBuffer::~ConstantBuffer ( )
```

Unmaps the pointer to the constant buffer.

5.3.3 Member Function Documentation

5.3.3.1 CopyData()

```
void FAREnder::ConstantBuffer::CopyData (
    UINT index,
    UINT byteSize,
    const void * data,
    UINT64 numBytes )
```

Copies data from the given data into the constant buffer. Uses 0-indexing.

5.3.3.2 CreateConstantBuffer()

```
void FARender::ConstantBuffer::CreateConstantBuffer (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const UINT & numOfBytes )
```

Creates and maps the constant buffer. The number of bytes allocated should be a multiple of 256 bytes.

5.3.3.3 CreateConstantBufferView()

```
void FARender::ConstantBuffer::CreateConstantBufferView (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & cbvHeap,
    UINT cbvSize,
    UINT cBufferIndex,
    UINT cbvHeapIndex,
    UINT numBytes )
```

Creates and maps the constant buffer view and stores it in the specified descriptor heap.

The documentation for this class was generated from the following file:

- [FABuffer.h](#)

5.4 FARender::DepthStencilBuffer Class Reference

A wrapper for depth stencil buffer resources. Uses DirectD 12 API.

```
#include "FABuffer.h"
```

Public Member Functions

- [DepthStencilBuffer](#) (DXGI_FORMAT format=DXGI_FORMAT_D24_UNORM_S8_UINT)
Default Constructor.
- DXGI_FORMAT [GetDepthStencilFormat](#) () const
Returns the format of the depth stencil buffer.
- void [CreateDepthStencilBufferAndView](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &dsvHeap, unsigned int indexWhereToStoreView, unsigned int dsvSize, unsigned int width, unsigned int height, unsigned int sampleCount=1)
Creates the depth stencil buffer and view.
- void [ResetBuffer](#) ()
Resest the depth stencil buffer.
- void [ClearDepthStencilBuffer](#) (const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &dsvHeap, unsigned int indexOfView, unsigned int dsvSize, float clearValue)
Clears the depth stencil buffer with the specified clear value.

5.4.1 Detailed Description

A wrapper for depth stencil buffer resources. Uses DirectD 12 API.

5.4.2 Constructor & Destructor Documentation

5.4.2.1 DepthStencilBuffer()

```
FARender::DepthStencilBuffer::DepthStencilBuffer (
    DXGI_FORMAT format = DXGI_FORMAT_D24_UNORM_S8_UINT )
```

Default Constructor.

5.4.3 Member Function Documentation

5.4.3.1 ClearDepthStencilBuffer()

```
void FAREnder::DepthStencilBuffer::ClearDepthStencilBuffer (
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & dsvHeap,
    unsigned int indexOfView,
    unsigned int dsvSize,
    float clearValue )
```

Clears the depth stencil buffer with the specified clear value.

5.4.3.2 CreateDepthStencilBufferAndView()

```
void FAREnder::DepthStencilBuffer::CreateDepthStencilBufferAndView (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & dsvHeap,
    unsigned int indexOfWhereToStoreView,
    unsigned int dsvSize,
    unsigned int width,
    unsigned int height,
    unsigned int sampleCount = 1 )
```

Creates the depth stencil buffer and view.

5.4.3.3 GetDepthStencilFormat()

```
DXGI_FORMAT FARender::DepthStencilBuffer::GetDepthStencilFormat ( ) const
```

Returns the format of the depth stencil buffer.

5.4.3.4 ResetBuffer()

```
void FARender::DepthStencilBuffer::ResetBuffer ( )
```

Resest the depth stencil buffer.

The documentation for this class was generated from the following file:

- [FABuffer.h](#)

5.5 FARender::DeviceResources Class Reference

A wrapper for resources that are needed to render objects and text using the Direct3D 12 API.

```
#include "FADeviceResources.h"
```

Public Member Functions

- **DeviceResources** (const [DeviceResources](#) &)=delete
- **DeviceResources** & **operator=** (const [DeviceResources](#) &)=delete
- **~DeviceResources** ()
Flushes the command queue.
- const Microsoft::WRL::ComPtr< ID3D12Device > & **GetDevice** () const
Returns a constant reference to the ID3D12Device objet.
- const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & **GetCommandList** () const
Returns a constant reference to the ID3D12GraphicsCommandList objet.
- DXGI_FORMAT **GetBackBufferFormat** () const
Returns a constant reference to the back buffer format.
- DXGI_FORMAT **GetDepthStencilFormat** () const
Returns a constant reference to the depth stencil format.
- unsigned int **GetCBVSize** () const
The size of a constant buffer view.
- unsigned int **GetNumFrames** () const
Returns the number of frames.
- unsigned int **GetCurrentFrame** () const
Returns the current frame.
- const [TextResources](#) & **GetTextResources** () const
Returns a constant reference to the TextResources object.
- void **UpdateCurrentFrameFenceValue** ()
Updates the current frames fence value.

- void [FlushCommandQueue](#) ()
Synchronizes the CPU and GPU. Use this function to make sure all of the commands in command list are executed by the GPU before the CPU writes in new commands.
- void [WaitForGPU](#) () const
Waits for the GPU to execute all of the commands of the current frame. Signal should have been called before this function is called.
- void [Signal](#) ()
Adds an instruction to the GPU to set the fence value to the current fence value.
- void [Resize](#) (int width, int height, const HWND &handle, bool isMSAAEnabled, bool isTextEnabled)
Call when the window gets resized. Call when you initialize your program.
- void [RTBufferTransition](#) (bool isMSAAEnabled, bool isTextEnabled)
Transitions the render target buffer.
- void [BeforeTextDraw](#) ()
Prepares to render text.
- void [AfterTextDraw](#) ()
Executes the text commands.
- void [Execute](#) () const
Executes the command list.
- void [Present](#) ()
Swaps the front and back buffers.
- void [Draw](#) (bool isMSAAEnabled)
- void [NextFrame](#) ()
Updates the current frame value to go to the next frame.

Static Public Member Functions

- static [DeviceResources](#) & [GetInstance](#) (unsigned int width, unsigned int height, HWND windowHandle, unsigned int numFrames, bool isMSAAEnabled, bool isTextEnabled)
Call to make an object of [DeviceResources](#). This only allows one instance to exist.

5.5.1 Detailed Description

A wrapper for resources that are needed to render objects and text using the Direct3D 12 API.

5.5.2 Constructor & Destructor Documentation

5.5.2.1 ~DeviceResources()

```
FARender::DeviceResources::~DeviceResources ( )
```

Flushes the command queue.

5.5.3 Member Function Documentation

5.5.3.1 AfterTextDraw()

```
void FARender::DeviceResources::AfterTextDraw ( )
```

Executes the text commands.

5.5.3.2 BeforeTextDraw()

```
void FARender::DeviceResources::BeforeTextDraw ( )
```

Prepares to render text.

5.5.3.3 Execute()

```
void FARender::DeviceResources::Execute ( ) const
```

Executes the command list.

5.5.3.4 FlushCommandQueue()

```
void FARender::DeviceResources::FlushCommandQueue ( )
```

Synchronizes the CPU and GPU. Use this function to make sure all of the commands in command list are executed by the GPU before the CPU writes in new commands.

5.5.3.5 GetBackBufferFormat()

```
DXGI_FORMAT FARender::DeviceResources::GetBackBufferFormat ( ) const
```

Returns a constant reference to the back buffer format.

5.5.3.6 GetCBVSize()

```
unsigned int FARender::DeviceResources::GetCBVSize ( ) const
```

The size of a constant buffer view.

5.5.3.7 GetCommandList()

```
const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & FARender::DeviceResources::GetCommandList ( ) const
```

Returns a constant reference to the ID3D12GraphicsCommandList object.

5.5.3.8 GetCurrentFrame()

```
unsigned int FARender::DeviceResources::GetCurrentFrame ( ) const
```

Returns the current frame.

5.5.3.9 GetDepthStencilFormat()

```
DXGI_FORMAT FARender::DeviceResources::GetDepthStencilFormat ( ) const
```

Returns a constant reference to the depth stencil format.

5.5.3.10 GetDevice()

```
const Microsoft::WRL::ComPtr< ID3D12Device > & FARender::DeviceResources::GetDevice ( ) const
```

Returns a constant reference to the ID3D12Device object.

5.5.3.11 GetInstance()

```
static DeviceResources & FARender::DeviceResources::GetInstance (
    unsigned int width,
    unsigned int height,
    HWND windowHandle,
    unsigned int numFrames,
    bool isMSAAEnabled,
    bool isTextEnabled ) [static]
```

Call to make an object of [DeviceResources](#). This only allows one instance to exist.

5.5.3.12 GetNumFrames()

```
unsigned int FARender::DeviceResources::GetNumFrames ( ) const
```

Returns the number of frames.

5.5.3.13 GetTextResources()

```
const TextResources & FARender::DeviceResources::GetTextResources ( ) const
```

Returns a constant reference to the [TextResources](#) object.

5.5.3.14 NextFrame()

```
void FARender::DeviceResources::NextFrame ( )
```

Updates the current frame value to go to the next frame.

5.5.3.15 Present()

```
void FARender::DeviceResources::Present ( )
```

Swaps the front and back buffers.

5.5.3.16 Resize()

```
void FARender::DeviceResources::Resize (
    int width,
    int height,
    const HWND & handle,
    bool isMSAAEnabled,
    bool isTextEnabled )
```

Call when the window gets resized. Call when you initialize your program.

5.5.3.17 RTBufferTransition()

```
void FARender::DeviceResources::RTBufferTransition (
    bool isMSAAEnabled,
    bool isTextEnabled )
```

Transitions the render target buffer.

5.5.3.18 Signal()

```
void FARender::DeviceResources::Signal ( )
```

Adds an instruction to the GPU to set the fence value to the current fence value.

5.5.3.19 UpdateCurrentFrameFenceValue()

```
void FARender::DeviceResources::UpdateCurrentFrameFenceValue ( )
```

Updates the current frames fence value.

5.5.3.20 WaitForGPU()

```
void FARender::DeviceResources::WaitForGPU ( ) const
```

Waits for the GPU to execute all of the commands of the current frame. Signal should have been called before this function is called.

5.7 FARender::DrawSettings Struct Reference

Holds a array of objects that use the same PSO, root signature and primitive.

```
#include "FARenderScene.h"
```

Public Attributes

- Microsoft::WRL::ComPtr< ID3D12PipelineState > **pipelineState**
- Microsoft::WRL::ComPtr< ID3D12RootSignature > **rootSig**
- D3D_PRIMITIVE_TOPOLOGY **prim** { D3D_PRIMITIVE_TOPOLOGY_TRIANGLELIST }
- std::vector< FAShapes::DrawArguments > **drawArgs**

5.7.1 Detailed Description

Holds a array of objects that use the same PSO, root signature and primitive.

The documentation for this struct was generated from the following file:

- [FARenderScene.h](#)

5.8 FARender::IndexBuffer Class Reference

This class stores indices in a Direct3D 12 default buffer.

```
#include "FABuffer.h"
```

Public Member Functions

- **IndexBuffer** (const [IndexBuffer](#) &)=delete
- [IndexBuffer](#) & **operator=** (const [IndexBuffer](#) &)=delete
- const D3D12_INDEX_BUFFER_VIEW & [GetIndexBufferView](#) ()
Returns a constant reference to the vertex buffer view.
- void [CreateIndexBuffer](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, const void *data, UINT numBytes)
Creates the vertex buffer and stores all of the specified vertices in the vertex buffer.
- void [CreateIndexBufferView](#) (UINT numBytes, DXGI_FORMAT format)
Creates the vertex buffer view and stores it.

5.8.1 Detailed Description

This class stores indices in a Direct3D 12 default buffer.

5.8.2 Member Function Documentation

5.8.2.1 CreateIndexBuffer()

```
void FARender::IndexBuffer::CreateIndexBuffer (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    const void * data,
    UINT numBytes )
```

Creates the vertex buffer and stores all of the specified vertices in the vertex buffer.

5.8.2.2 CreateIndexBufferView()

```
void FARender::IndexBuffer::CreateIndexBufferView (
    UINT numBytes,
    DXGI_FORMAT format )
```

Creates the vertex buffer view and stores it.

5.8.2.3 GetIndexBufferView()

```
const D3D12_INDEX_BUFFER_VIEW & FARender::IndexBuffer::GetIndexBufferView ( )
```

Returns a constant reference to the vertex buffer view.

The documentation for this class was generated from the following file:

5.9 FARender::MultiSampling Class Reference

A wrapper for multisampling resources. Uses DirectD 12 API.

```
#include "FAMultiSampling.h"
```

Public Member Functions

- [MultiSampling](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, DXGI_FORMAT rtFormat, DXGI_FORMAT dsFormat, unsigned int sampleCount)
Constructor. Checks if the specified format and sample count are supported by the specified device for multi-sampling. Throws a runtime_error if they are not supported.
- const Microsoft::WRL::ComPtr< ID3D12Resource > & [GetRenderTargetBuffer](#) ()
Returns the MSAA render target buffer.
- DXGI_FORMAT [GetRenderTargetFormat](#) ()
- DXGI_FORMAT [GetDepthStencilFormat](#) ()
- void [ResetBuffers](#) ()
Resets the MSAA render target buffer and MSAA depth stencil buffer.
- void [CreateRenderTargetBufferAndView](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &rtvHeap, unsigned int indexWhereToStoreView, unsigned int rtvSize, unsigned int width, unsigned int height)
Creates the MSAA render target buffer and a view to it.
- void [CreateDepthStencilBufferAndView](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &dsvHeap, unsigned int indexWhereToStoreView, unsigned int dsvSize, unsigned int width, unsigned int height)
Creates the MSAA depth stencil buffer and a view to it.
- void [Transition](#) (const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, D3D12_RESOURCE_STATES before, D3D12_RESOURCE_STATES after)
Transitions the MSAA render target buffer from the specified before state to the specified after state.
- void [ClearRenderTargetBuffer](#) (const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &rtvHeap, unsigned int indexOfView, unsigned int rtvSize, const float *clearValue)
Clears the MSAA render target buffer with the specified clear value.
- void [ClearDepthStencilBuffer](#) (const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &dsvHeap, unsigned int indexOfView, unsigned int dsvSize, float clearValue)
Clears the MSAA depth stencil buffer with the specified clear value.

5.9.1 Detailed Description

A wrapper for multisampling resources. Uses DirectD 12 API.

5.9.2 Constructor & Destructor Documentation

5.9.2.1 MultiSampling()

```
FARender::MultiSampling::MultiSampling (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    DXGI_FORMAT rtFormat,
    DXGI_FORMAT dsFormat,
    unsigned int sampleCount )
```

Constructor. Checks if the specified format and sample count are supported by the specified device for multi-sampling. Throws a runtime_error if they are not supported.

5.9.3 Member Function Documentation

5.9.3.1 ClearDepthStencilBuffer()

```
void FAREnder::MultiSampling::ClearDepthStencilBuffer (
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & dsvHeap,
    unsigned int indexOfView,
    unsigned int dsvSize,
    float clearValue )
```

Clears the MSAA depth stencil buffer with the specified clear value.

5.9.3.2 ClearRenderTargetBuffer()

```
void FAREnder::MultiSampling::ClearRenderTargetBuffer (
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & rtvHeap,
    unsigned int indexOfView,
    unsigned int rtvSize,
    const float * clearValue )
```

Clears the MSAA render target buffer with the specified clear value.

5.9.3.3 CreateDepthStencilBufferAndView()

```
void FAREnder::MultiSampling::CreateDepthStencilBufferAndView (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & dsvHeap,
    unsigned int indexOfWhereToStoreView,
    unsigned int dsvSize,
    unsigned int width,
    unsigned int height )
```

Creates the MSAA depth stencil buffer and a view to it.

5.9.3.4 CreateRenderTargetBufferAndView()

```
void FAREnder::MultiSampling::CreateRenderTargetBufferAndView (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & rtvHeap,
    unsigned int indexOfWhereToStoreView,
    unsigned int rtvSize,
    unsigned int width,
    unsigned int height )
```

Creates the MSAA render target buffer and a view to it.

5.9.3.5 GetRenderTargetBuffer()

```
const Microsoft::WRL::ComPtr< ID3D12Resource > & FARender::MultiSampling::GetRenderTargetBuffer ( )
```

Returns the MSAA render target buffer.

5.9.3.6 ResetBuffers()

```
void FARender::MultiSampling::ResetBuffers ( )
```

Resets the MSAA render target buffer and MSAA depth stencil buffer.

5.9.3.7 Transition()

```
void FARender::MultiSampling::Transition (
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    D3D12_RESOURCE_STATES before,
    D3D12_RESOURCE_STATES after )
```

Transitions the MSAA render target buffer from the specified before state to the specified after state.

The documentation for this class was generated from the following file:

- FAMultiSampling.h

5.10 FARender::RenderScene Class Reference

This class is used to render a scene using Direct3D 12 API.

```
#include "FARenderScene.h"
```

Public Member Functions

- void **CreateRootSignature** (unsigned int drawSettingsIndex)
- void **CreateVertexBuffer** ()
- void [CreateIndexBuffer](#) ()
Creates an index buffer with the specified name and stores all of the added indices. Also creates a view to the index buffer.
- void [CreateCBVHeap](#) (UINT numDescriptors, UINT shaderRegister)
*Execute commands and flush the command queue after calling createVertexBuffer() and createIndexBuffer().
Creates the CBV heap.*
- void [CreateConstantBuffer](#) (UINT numOfBytes)
Creates a constant buffer for each frame.
- void [CreateConstantBufferView](#) (UINT index, UINT numBytes)
Creates a constant buffer view for each frame and stores it in the CBV heap.
- void [SetPSO](#) (unsigned int drawSettingsIndex, const Microsoft::WRL::ComPtr< ID3D12PipelineState > &pso)
Sets the PSO in the specified DrawSettings structure to the specified pso. If the index to the specified DrawSettings structure is out of bounds an out_of_range exception is thrown.
- void [SetRootSignature](#) (unsigned int drawSettingsIndex, const Microsoft::WRL::ComPtr< ID3D12RootSignature > &rootSignature)
Sets the root signature in the specified DrawSettings structure to the specified root signature. If the index to the specified DrawSettings structure is out of bounds an out_of_range exception is thrown.
- void [SetPrimitive](#) (unsigned int drawSettingsIndex, const D3D_PRIMITIVE_TOPOLOGY &primitive)
Sets the Primitive in the specified DrawSettings structure to the specified primitive. If the index to the specified DrawSettings structure is out of bounds an out_of_range exception is thrown.
- void [AddDrawArgument](#) (unsigned int drawSettingsIndex, const FAShapes::DrawArguments &drawArg)
Adds the specified draw argument structure to the DrawArguments vector of the specified DrawSettings structure. If the index to the specified DrawSettings structure is out of bounds an out_of_range exception is thrown.
- void [CreateDrawArgument](#) (unsigned int drawSettingsIndex, unsigned int indexCount, unsigned int locationOfFirstIndex, int indexOfFirstVertex, int indexOfConstantData)

- Creates a DrawArgument structure with the specified values. The created DrawArgument structure is stored in the DrawArguments vector of the specified DrawSettings structure. If the index to the specified DrawSettings structure is out of bounds an out_of_range exception is thrown.*
- void [RemoveDrawArgument](#) (unsigned int drawSettingsIndex, unsigned int drawArgIndex)

Removes the specified DrawArgument structure in the DrawArguments vector of the specified DrawSettings structure. If the index to the specified DrawSettings structure or if the index to the specified DrawArguments structure is out of bounds an out_of_range exception is thrown.
 - void [CreateDrawSettings](#) ()

Creates a DrawSettings.
 - void [RemoveDrawSettings](#) (unsigned int drawSettingsIndex)

Removes the specified DrawSettings structure. If the index to the specified DrawSettings structure is out of bounds an out_of_range exception is thrown.
 - void [CreateText](#) (FAMath::Vector4D textLocation, const std::wstring &textString, float textSize, const FColor::Color textColor)

Creates a Text object with the specified properties and stores it. For text location the first two values in the vector is the top-left location of the rectangle and the last two values are the bottom-right location of the rectangle.
 - void [RemoveText](#) (unsigned int textIndex)

Removes the specified Text object. If the index to the specified DrawSettings structure is out of bounds an out_of_range exception is thrown.
 - void [AddVertices](#) (const std::vector< FAShapes::Vertex > &vertices)

Adds the specified vertices to the vertex list.
 - void [AddVertices](#) (const FAShapes::Vertex *vertices, unsigned int numVertices)

Adds the specified vertices to the vertex list.
 - void [AddIndices](#) (const std::vector< unsigned int > &indices)

Adds the specified vertices to the index list.
 - void [AddIndices](#) (const unsigned int *indices, unsigned int numIndices)

Adds the specified vertices to the index list.
 - void [BeforeDrawObjects](#) ()

Puts all of the commands needed in the command list before drawing the objects of the scene. Call before calling the first drawObjects function.
 - void [DrawObjects](#) (unsigned int drawSettingsIndex)

Draws all of the objects that use the same PSO, root signature and primitive. Call in between a beforeDrawObjects function and a afterDrawObjects function.
 - void [AfterDrawObjects](#) ()

Transitions the render target buffer to the correct state and excutes commands.
 - void [BeforeDrawText](#) ()

Puts all of the commands needed in the command list before drawing the text of the scene. Call before calling the first RenderText function.
 - void [RenderText](#) (unsigned int textIndex)

Draws the specified Text object. Call in between a BeforeDrawText function and a AfterDrawText function.
 - void [AfterDrawText](#) ()

Transitions the render target buffer and executes all of the text drawing commands. Call after calling all the RenderText functions.
 - void [AfterDraw](#) ()

Presents and signals (puts a fence command in the command queue). Call after drawing all your objects and text.
 - void [ExecuteAndFlush](#) ()

Executes the commands to fill the vertex and index buffer with data and flushes the queue.
 - void [NextFrame](#) ()

Moves to next frame and waits for the GPU to finish executing the next frame's commands.
 - void [Resize](#) (unsigned int width, unsigned int height, HWND windowHandle)

Resizes the DeviceResources resources when the window gets resized.

- void [CopyData](#) (UINT index, UINT byteSize, const void *data, UINT64 numOfBytes)
Copies the specified data into the constant buffer.
- bool [IsMSAAEnabled](#) () const
Returns true if MSAA is enabled, false otherwise.
- void [DisableMSAA](#) (unsigned int width, unsigned int height, HWND windowHandle)
Disables MSAA.
- void [EnableMSAA](#) (unsigned int width, unsigned int height, HWND windowHandle)
Enables MSAA.
- bool [IsTextEnabled](#) () const
Returns true if text is enabled, false otherwise.
- void [DisableText](#) (unsigned int width, unsigned int height, HWND windowHandle)
Disables text.
- void [EnableText](#) (unsigned int width, unsigned int height, HWND windowHandle)
Enables text.

5.10.1 Detailed Description

This class is used to render a scene using Direct3D 12 API.

5.10.2 Member Function Documentation

5.10.2.1 AddDrawArgument()

```
void FARender::RenderScene::AddDrawArgument (
    unsigned int drawSettingsIndex,
    const FAShapes::DrawArguments & drawArg )
```

Adds the specified draw argument structure to the DrawArguments vector of the specified [DrawSettings](#) structure. If the index to the specified [DrawSettings](#) structure is out of bounds an out_of_range exception is thrown.

5.10.2.2 AddIndices() [1/2]

```
void FARender::RenderScene::AddIndices (
    const std::vector< unsigned int > & indices )
```

Adds the specified vertices to the index list.

5.10.2.3 AddIndices() [2/2]

```
void FARender::RenderScene::AddIndices (
    const unsigned int * indices,
    unsigned int numIndices )
```

Adds the specified vertices to the index list.

5.10.2.4 AddVertices() [1/2]

```
void FARender::RenderScene::AddVertices (
    const FAShapes::Vertex * vertices,
    unsigned int numVertices )
```

Adds the specified vertices to the vertex list.

5.10.2.5 AddVertices() [2/2]

```
void FARender::RenderScene::AddVertices (
    const std::vector< FAShapes::Vertex > & vertices )
```

Adds the specified vertices to the vertex list.

5.10.2.6 AfterDraw()

```
void FARender::RenderScene::AfterDraw ( )
```

Presents and signals (puts a fence command in the command queue). Call after drawing all your objects and text.

5.10.2.7 AfterDrawObjects()

```
void FARender::RenderScene::AfterDrawObjects ( )
```

Transitions the render target buffer to the correct state and excutes commands.

5.10.2.8 AfterDrawText()

```
void FARender::RenderScene::AfterDrawText ( )
```

Transitions the render target buffer and executes all of the text drawing commands. Call after calling all the Render↔Text functions.

5.10.2.9 BeforeDrawObjects()

```
void FARender::RenderScene::BeforeDrawObjects ( )
```

Puts all of the commands needed in the command list before drawing the objects of the scene. Call before calling the first drawObjects function.

5.10.2.10 BeforeDrawText()

```
void FARender::RenderScene::BeforeDrawText ( )
```

Puts all of the commands needed in the command list before drawing the text of the scene. Call before calling the first RenderText function.

5.10.2.11 CopyData()

```
void FARender::RenderScene::CopyData (
    UINT index,
    UINT byteSize,
    const void * data,
    UINT64 numOfBytes )
```

Copies the specified data into the constant buffer.

5.10.2.12 CreateCBVHeap()

```
void FARender::RenderScene::CreateCBVHeap (
    UINT numDescriptors,
    UINT shaderRegister )
```

Creates the CBV heap.

5.10.2.13 CreateConstantBuffer()

```
void FARender::RenderScene::CreateConstantBuffer (
    UINT numOfBytes )
```

Creates a constant buffer for each frame.

5.10.2.14 CreateConstantBufferView()

```
void FARender::RenderScene::CreateConstantBufferView (
    UINT index,
    UINT numBytes )
```

Creates a constant buffer view for each frame and stores it in the CBV heap.

5.10.2.15 CreateDrawArgument()

```
void FARender::RenderScene::CreateDrawArgument (
    unsigned int drawSettingsIndex,
    unsigned int indexCount,
    unsigned int locationOfFirstIndex,
    int indexOfFirstVertex,
    int indexOfConstantData )
```

Creates a DrawArgument structure with the specified values. The created DrawArgument structure is stored in the DrawArguments vector of the specified [DrawSettings](#) structure. If the index to the specified [DrawSettings](#) structure is out of bounds an out_of_range exception is thrown.

5.10.2.16 CreateDrawSettings()

```
void FARender::RenderScene::CreateDrawSettings ( )
```

Creates a [DrawSettings](#).

5.10.2.17 CreateIndexBuffer()

```
void FARender::RenderScene::CreateIndexBuffer ( )
```

Creates an index buffer with the specified name and stores all of the added indices. Also creates a view to the index buffer.

Execute commands and flush the command queue after calling createVertexBuffer() and createIndexBuffer().

5.10.2.18 CreateText()

```
void FARender::RenderScene::CreateText (
    FAMath::Vector4D textLocation,
    const std::wstring & textString,
    float textSize,
    const FAColor::Color textColor )
```

Creates a [Text](#) object with the specified properties and stores it. For text location the first two values in the vector is the top-left location of the rectangle and the last two values are the bottom-right location of the rectangle.

5.10.2.19 DisableMSAA()

```
void FARender::RenderScene::DisableMSAA (
    unsigned int width,
    unsigned int height,
    HWND windowHandle )
```

Disables MSAA.

5.10.2.20 DisableText()

```
void FARender::RenderScene::DisableText (
    unsigned int width,
    unsigned int height,
    HWND windowHandle )
```

Disables text.

5.10.2.21 DrawObjects()

```
void FARender::RenderScene::DrawObjects (
    unsigned int drawSettingsIndex )
```

Draws all of the objects that use the same PSO, root signature and primitive. Call in between a beforeDrawObjects function and a afterDrawObjects function.

.

Ex.

beforeDrawObjects()

drawObjects()

drawObjects()

afterDrawObjects()

Throws an out_of_range exception if the index of the specified [DrawSettings](#) structure is out of bounds.

5.10.2.22 EnableMSAA()

```
void FARender::RenderScene::EnableMSAA (
    unsigned int width,
    unsigned int height,
    HWND windowHandle )
```

Enables MSAA.

5.10.2.23 EnableText()

```
void FARender::RenderScene::EnableText (
    unsigned int width,
    unsigned int height,
    HWND windowHandle )
```

Enables text.

5.10.2.24 ExecuteAndFlush()

```
void FARender::RenderScene::ExecuteAndFlush ( )
```

Executes the commands to fill the vertex and index buffer with data and flushes the queue.

5.10.2.25 IsMSAAEnabled()

```
bool FARender::RenderScene::IsMSAAEnabled ( ) const
```

Returns true if MSAA is enabled, false otherwise.

5.10.2.26 IsTextEnabled()

```
bool FARender::RenderScene::IsTextEnabled ( ) const
```

Returns true if text is enabled, false otherwise.

5.10.2.27 NextFrame()

```
void FARender::RenderScene::NextFrame ( )
```

Moves to next frame and waits for the GPU to finish executing the next frame's commands.

5.10.2.28 RemoveDrawArgument()

```
void FARender::RenderScene::RemoveDrawArgument (
    unsigned int drawSettingsIndex,
    unsigned int drawArgIndex )
```

Removes the specified DrawArgument structure in the DrawArguments vector of the specified [DrawSettings](#) structure. If the index to the specified [DrawSettings](#) structure or if the index to the specified DrawArguments structure is out of bounds an out_of_range exception is thrown.

5.10.2.29 RemoveDrawSettings()

```
void FAREnder::RenderScene::RemoveDrawSettings (
    unsigned int drawSettingsIndex )
```

Removes the specified [DrawSettings](#) structure. If the index to the specified [DrawSettings](#) structure is out of bounds an `out_of_range` exception is thrown.

5.10.2.30 RemoveText()

```
void FAREnder::RenderScene::RemoveText (
    unsigned int textIndex )
```

Removes the specified [Text](#) object. If the index to the specified [DrawSettings](#) structure is out of bounds an `out_of_range` exception is thrown.

5.10.2.31 RenderText()

```
void FAREnder::RenderScene::RenderText (
    unsigned int textIndex )
```

Draws the specified [Text](#) object. Call in between a `BeforeDrawText` function and a `AfterDrawText` function.

.

Ex.

`beforeDrawText()`

`drawText()`

`drawText()`

`afterDrawText()`

Throws an `out_of_range` exception if the specified [Text](#) object does not exist.

5.10.2.32 Resize()

```
void FAREnder::RenderScene::Resize (
    unsigned int width,
    unsigned int height,
    HWND windowHandle )
```

Resizes the [DeviceResources](#) resources when the window gets resized.

5.10.2.33 SetPrimitive()

```
void FAREnder::RenderScene::SetPrimitive (
    unsigned int drawSettingsIndex,
    const D3D_PRIMITIVE_TOPOLOGY & primitive )
```

Sets the Primitive in the specified [DrawSettings](#) structure to the specified primitive. If the index to the specified [DrawSettings](#) structure is out of bounds an `out_of_range` exception is thrown.

5.10.2.34 SetPSO()

```
void FARender::RenderScene::SetPSO (
    unsigned int drawSettingsIndex,
    const Microsoft::WRL::ComPtr< ID3D12PipelineState > & pso )
```

Sets the PSO in the specified [DrawSettings](#) structure to the specified pso. If the index to the specified [DrawSettings](#) structure is out of bounds an out_of_range exception is thrown.

5.10.2.35 SetRootSignature()

```
void FARender::RenderScene::SetRootSignature (
    unsigned int drawSettingsIndex,
    const Microsoft::WRL::ComPtr< ID3D12RootSignature > & rootSignature )
```

Sets the root signature in the specified [DrawSettings](#) structure to the specified root signature. If the index to the specified [DrawSettings](#) structure is out of bounds an out_of_range exception is thrown.

The documentation for this class was generated from the following file:

- [FARenderScene.h](#)

5.11 FARender::RenderTargetBuffer Class Reference

A wrapper for render target buffer resources. Uses DirectD 12 API.

```
#include "FABuffer.h"
```

Public Member Functions

- [RenderTargetBuffer](#) (DXGI_FORMAT format=DXGI_FORMAT_R8G8B8A8_UNORM)
Default Constructor.
- DXGI_FORMAT [GetRenderTargetFormat](#) () const
Returns the format of the render target buffer.
- Microsoft::WRL::ComPtr< ID3D12Resource > & [GetRenderTargetBuffer](#) ()
Returns a reference to the render target buffer.
- const Microsoft::WRL::ComPtr< ID3D12Resource > & [GetRenderTargetBuffer](#) () const
Returns a constant reference to the render target buffer.
- void [CreateRenderTargetBufferAndView](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &rtvHeap, unsigned int indexWhereToStoreView, unsigned int rtvSize, unsigned int width, unsigned int height, unsigned int sampleCount=1)
Creates the render target buffer and view.
- void [ResetBuffer](#) ()
Resest the render target buffer.
- void [ClearRenderTargetBuffer](#) (const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &rtvHeap, unsigned int indexWhereToStoreView, unsigned int rtvSize, const float *clearValue)
Clears the render target buffer with the specified clear value.

5.11.1 Detailed Description

A wrapper for render target buffer resources. Uses DirectD 12 API.

5.11.2 Constructor & Destructor Documentation

5.11.2.1 RenderTargetBuffer()

```
FARender::RenderTargetBuffer::RenderTargetBuffer (
    DXGI_FORMAT format = DXGI_FORMAT_R8G8B8A8_UNORM )
```

Default Constructor.

5.11.3 Member Function Documentation

5.11.3.1 ClearRenderTargetBuffer()

```
void FARender::RenderTargetBuffer::ClearRenderTargetBuffer (
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & rtvHeap,
    unsigned int indexOfView,
    unsigned int rtvSize,
    const float * clearValue )
```

Clears the render target buffer with the specified clear value.

5.11.3.2 CreateRenderTargetBufferAndView()

```
void FARender::RenderTargetBuffer::CreateRenderTargetBufferAndView (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & rtvHeap,
    unsigned int indexWhereToStoreView,
    unsigned int rtvSize,
    unsigned int width,
    unsigned int height,
    unsigned int sampleCount = 1 )
```

Creates the render target buffer and view.

5.11.3.3 GetRenderTargetBuffer() [1/2]

```
Microsoft::WRL::ComPtr< ID3D12Resource > & FARender::RenderTargetBuffer::GetRenderTargetBuffer  
( )
```

Returns a reference to the render target buffer.

5.11.3.4 GetRenderTargetBuffer() [2/2]

```
const Microsoft::WRL::ComPtr< ID3D12Resource > & FARender::RenderTargetBuffer::GetRenderTargetBuffer  
TargetBuffer ( ) const
```

Returns a constant reference to the render target buffer.

5.11.3.5 GetRenderTargetFormat()

```
DXGI_FORMAT FARender::RenderTargetBuffer::GetRenderTargetFormat ( ) const
```

Returns the format of the render target buffer.

5.11.3.6 ResetBuffer()

```
void FARender::RenderTargetBuffer::ResetBuffer ( )
```

Resest the render target buffer.

The documentation for this class was generated from the following file:

- [FABuffer.h](#)

5.12 FARender::SwapChain Class Reference

A wrapper for swap chain resources. Uses DirectD 12 API and DXGI API.

```
#include "FASwapChain.h"

Public Member Functions

- [SwapChain](#) (const Microsoft::WRL::ComPtr< IDXGIFactory4 > &dxgiFactory, const Microsoft::WRL::ComPtr< ID3D12CommandQueue > &commandQueue, HWND windowHandle, DXGI_FORMAT rtFormat=DXGI_FORMAT_R8G8B8A8_UNORM, DXGI_FORMAT dsFormat=DXGI_FORMAT_D24_UNORM_S8_UINT, unsigned int numRenderTargetBuffers=2)
Constructor. Creates a swap chain.
- const [RenderTargetBuffer](#) * [GetRenderTargetBuffers](#) () const
Returns a constant pointer to the render target buffers.
- const Microsoft::WRL::ComPtr< ID3D12Resource > & [GetCurrentBackBuffer](#) () const
Returns a constant reference to the current render target buffer.
- unsigned int [GetNumRenderTargetBuffers](#) () const
Returns the number of swap chain buffers.
- unsigned int [GetCurrentBackBufferIndex](#) () const
Returns the current back buffer index.
- DXGI_FORMAT [GetBackBufferFormat](#) () const
Returns the format of the swap chain.
- DXGI_FORMAT [GetDepthStencilFormat](#) () const
Returns the format of the depth stencil buffer.
- void [ResetBuffers](#) ()
The render target buffers no longer reference the swap chain buffers after this function is executed.
- void [ResizeSwapChain](#) (unsigned width, unsigned height)
Resizes the swap chain.
- void [CreateRenderTargetBuffersAndViews](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &rtvHeap, unsigned int indexWhereToStoreFirstView, unsigned int rtvSize)
Creates the render target buffers and views to them.
- void [CreateDepthStencilBufferAndView](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &dsvHeap, unsigned int index, unsigned int dsvSize, unsigned int width, unsigned int height)
Creates the swap chains depth stencil buffer and view to it.
- void [ClearCurrentBackBuffer](#) (const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &rtvHeap, unsigned int indexOfFirstView, unsigned int rtvSize, const float *backBufferClearValue)
Clears the current render target buffer.
- void [ClearDepthStencilBuffer](#) (const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > &dsvHeap, unsigned int indexOfView, unsigned int dsvSize, float clearValue)
Clears the swap chains depth stencil buffer with the specified clear value.
- void [Transition](#) (const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, D3D12_RESOURCE_STATES before, D3D12_RESOURCE_STATES after)
Transitions the current render target buffer from the specified before state to the specified after state.
- void [Present](#) ()
Swaps the front and back buffers.

5.12.1 Detailed Description

A wrapper for swap chain resources. Uses DirectD 12 API and DXGI API.

5.12.2 Constructor & Destructor Documentation

5.12.2.1 SwapChain()

```
FARender::SwapChain::SwapChain (
    const Microsoft::WRL::ComPtr< IDXGIFactory4 > & dxgiFactory,
    const Microsoft::WRL::ComPtr< ID3D12CommandQueue > & commandQueue,
    HWND windowHandle,
    DXGI_FORMAT rtFormat = DXGI_FORMAT_R8G8B8A8_UNORM,
    DXGI_FORMAT dsFormat = DXGI_FORMAT_D24_UNORM_S8_UINT,
    unsigned int numRenderTargetBuffers = 2 )
```

Constructor. Creates a swap chain.

5.12.3 Member Function Documentation

5.12.3.1 ClearCurrentBackBuffer()

```
void FAREnder::SwapChain::ClearCurrentBackBuffer (
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & rtvHeap,
    unsigned int indexOfFirstView,
    unsigned int rtvSize,
    const float * backBufferClearValue )
```

Clears the current render target buffer.

5.12.3.2 ClearDepthStencilBuffer()

```
void FAREnder::SwapChain::ClearDepthStencilBuffer (
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & dsvHeap,
    unsigned int indexOfView,
    unsigned int dsvSize,
    float clearValue )
```

Clears the swap chains depth stencil buffer with the specified clear value.

5.12.3.3 CreateDepthStencilBufferAndView()

```
void FAREnder::SwapChain::CreateDepthStencilBufferAndView (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & dsvHeap,
    unsigned int index,
    unsigned int dsvSize,
    unsigned int width,
    unsigned int height )
```

Creates the swap chains depth stencil buffer and view to it.

5.12.3.4 CreateRenderTargetBuffersAndViews()

```
void FARender::SwapChain::CreateRenderTargetBuffersAndViews (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12DescriptorHeap > & rtvHeap,
    unsigned int indexOfWhereToStoreFirstView,
    unsigned int rtvSize )
```

Creates the render target buffers and views to them.

5.12.3.5 GetBackBufferFormat()

```
DXGI_FORMAT FARender::SwapChain::GetBackBufferFormat ( ) const
```

Returns the format of the swap chain.

5.12.3.6 GetCurrentBackBuffer()

```
const Microsoft::WRL::ComPtr< ID3D12Resource > & FARender::SwapChain::GetCurrentBackBuffer ( )
const
```

Returns a constant reference to the current render target buffer.

5.12.3.7 GetCurrentBackBufferIndex()

```
unsigned int FARender::SwapChain::GetCurrentBackBufferIndex ( ) const
```

Returns the current back buffer index.

5.12.3.8 GetDepthStencilFormat()

```
DXGI_FORMAT FARender::SwapChain::GetDepthStencilFormat ( ) const
```

Returns the format of the depth stencil buffer.

5.12.3.9 GetNumRenderTargetBuffers()

```
unsigned int FARender::SwapChain::GetNumRenderTargetBuffers ( ) const
```

Returns the number of swap chain buffers.

5.12.3.10 GetRenderTargetBuffers()

```
const RenderTargetBuffer * FARender::SwapChain::GetRenderTargetBuffers ( ) const
```

Returns a constant pointer to the render target buffers.

5.12.3.11 Present()

```
void FARender::SwapChain::Present ( )
```

Swaps the front and back buffers.

5.12.3.12 ResetBuffers()

```
void FARender::SwapChain::ResetBuffers ( )
```

The render target buffers no longer reference the swap chain buffers after this function is executed.

5.12.3.13 ResizeSwapChain()

```
void FARender::SwapChain::ResizeSwapChain (
    unsigned width,
    unsigned height )
```

Resizes the swap chain.

5.12.3.14 Transition()

```
void FARender::SwapChain::Transition (
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    D3D12_RESOURCE_STATES before,
    D3D12_RESOURCE_STATES after )
```

Transitions the current render target buffer from the specified before state to the specified after state.

The documentation for this class was generated from the following file:

- FASwapChain.h

5.13 FARender::Text Class Reference

This class is used to help render text. Stores the location of the text, the text string, text size and the color of the text.

```
#include "FAText.h"
```

Public Member Functions

- [Text](#) (const FAMath::Vector4D &textLocation, const std::wstring &textString, float textSize, const FAColor::Color &textColor)
*Overloaded Constructor. Initializes the format of the text.
For text location the first two values in the vector is the top-left location of the rectangle and the last two values are the bottom-right location of the rectangle.*
- const FAMath::Vector4D & [GetTextLocation](#) () const
Returns a constant reference to the text location.
- const std::wstring & [GetTextString](#) () const
Returns a constant reference to the text string.
- float [GetTextSize](#) () const
Returns the text size.
- const FAColor::Color & [GetTextColor](#) () const
Returns a constant reference to the text color.
- void [SetTextSize](#) (float textSize)
Changes the text size to the specified size.
- void [SetTextColor](#) (const FAColor::Color &textColor)
Changes the text color to the specified color.
- void [SetTextString](#) (const std::wstring &textString)
Changes the text string to the specified string.
- void [SetTextLocation](#) (const FAMath::Vector4D &textLocation)
Changes the text location to the specified location.

5.13.1 Detailed Description

This class is used to help render text. Stores the location of the text, the text string, text size and the color of the text.

5.13.2 Constructor & Destructor Documentation

5.13.2.1 Text()

```
FARender::Text::Text (
    const FAMath::Vector4D & textLocation,
    const std::wstring & textString,
    float textSize,
    const FAColor::Color & textColor )
```

Overloaded Constructor. Initializes the format of the text.

For text location the first two values in the vector is the top-left location of the rectangle and the last two values are the bottom-right location of the rectangle.

5.13.3 Member Function Documentation

5.13.3.1 GetTextColor()

```
const FColor::Color & FRender::Text::GetTextColor ( ) const
```

Returns a constant reference to the text color.

5.13.3.2 GetTextLocation()

```
const FMath::Vector4D & FRender::Text::GetTextLocation ( ) const
```

Returns a constant reference to the text location.

5.13.3.3 GetTextSize()

```
float FRender::Text::GetTextSize ( ) const
```

Returns the text size.

5.13.3.4 GetTextString()

```
const std::wstring & FRender::Text::GetTextString ( ) const
```

Returns a constant reference to the text string.

5.13.3.5 SetTextColor()

```
void FRender::Text::SetTextColor (
    const FColor::Color & textColor )
```

Changes the text color to the specified color.

5.13.3.6 SetTextLocation()

```
void FAREnder::Text::SetTextLocation (
    const FMath::Vector4D & textLocation )
```

Changes the text location to the specified location.

5.13.3.7 SetTextSize()

```
void FAREnder::Text::SetTextSize (
    float textSize )
```

Changes the text size to the specified size.

5.13.3.8 SetTextString()

```
void FAREnder::Text::SetTextString (
    const std::wstring & textString )
```

Changes the text string to the specified string.

The documentation for this class was generated from the following file:

5.14 FAREnder::TextResources Class Reference

A wrapper for resources that are needed to render text using Direct3D 11on12, Direct2D and DirectWrite.

```
#include "FATextResources.h"
```

Public Member Functions

- [TextResources](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12CommandQueue > &commandQueue, unsigned int numSwapChainBuffers)
Constructor. Initializes the text resources.
- const Microsoft::WRL::ComPtr< ID2D1DeviceContext > & [GetDirect2DDeviceContext](#) () const
Returns a constant reference to the direct 2D device context.
- const Microsoft::WRL::ComPtr< IDWriteFactory > & [GetDirectWriteFactory](#) () const
Returns a constant reference to the direct direct write factory.
- void [ResetBuffers](#) ()
Resets the text buffers.
- void [ResizeBuffers](#) (const [RenderTargetBuffer](#) *renderTargetBuffers, HWND windowHandle)
Resizes the buffers.
- void [BeforeRenderText](#) (unsigned int currentBackBuffer)
Prepares to render text.
- void [AfterRenderText](#) (unsigned int currentBackBuffer)
Executes text commands.

5.14.1 Detailed Description

A wrapper for resources that are needed to render text using Direct3D 11on12, Direct2D and DirectWrite.

5.14.2 Constructor & Destructor Documentation

5.14.2.1 TextResources()

```
FARender::TextResources::TextResources (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12CommandQueue > & commandQueue,
    unsigned int numSwapChainBuffers )
```

Constructor. Initializes the text resources.

5.14.3 Member Function Documentation

5.14.3.1 AfterRenderText()

```
void FAREnder::TextResources::AfterRenderText (
    unsigned int currentBackBuffer )
```

Executes text commands.

5.14.3.2 BeforeRenderText()

```
void FAREnder::TextResources::BeforeRenderText (
    unsigned int currentBackBuffer )
```

Prepares to render text.

5.14.3.3 GetDirect2DDeviceContext()

```
const Microsoft::WRL::ComPtr< ID2D1DeviceContext > & FAREnder::TextResources::GetDirect2↔
DDeviceContext ( ) const
```

Returns a constant reference to the direct 2D device context.

5.14.3.4 GetDirectWriteFactory()

```
const Microsoft::WRL::ComPtr< IDWriteFactory > & FARender::TextResources::GetDirectWriteFactory ( ) const
```

Returns a constant reference to the direct direct write factory.

5.14.3.5 ResetBuffers()

```
void FARender::TextResources::ResetBuffers ( )
```

Resets the text buffers.

5.14.3.6 ResizeBuffers()

```
void FARender::TextResources::ResizeBuffers (
    const RenderTargetBuffer * renderTargetBuffers,
    HWND windowHandle )
```

Resizes the buffers.

The documentation for this class was generated from the following file:

- FATextResources.h

5.15 FATime::Time Class Reference

Public Member Functions

- [Time](#) ()
Default Constructor. Gets and stores the seconds per count.
- void [Tick](#) ()
Stores the difference between the current time and the previous time.
- float [DeltaTime](#) () const
Returns the difference between the current time and the previous time.
- void [Reset](#) ()
Resets all time variables.
- void [Stop](#) ()
Stops the timer.
- void [Start](#) ()
Starts the timer.
- float [TotalTime](#) () const
Returns how much time has passed since [Reset\(\)](#) was called. Does not count any pause time.

5.15.1 Constructor & Destructor Documentation

5.15.1.1 Time()

```
FATime::Time::Time ( )
```

Default Constructor. Gets and stores the seconds per count.

5.15.2 Member Function Documentation

5.15.2.1 DeltaTime()

```
float FATime::Time::DeltaTime ( ) const
```

Returns the difference between the current time and the previous time.

5.15.2.2 Reset()

```
void FATime::Time::Reset ( )
```

Resets all time variables.

5.15.2.3 Start()

```
void FATime::Time::Start ( )
```

Starts the timer.

5.15.2.4 Stop()

```
void FATime::Time::Stop ( )
```

Stops the timer.

5.15.2.5 Tick()

```
void FATime::Time::Tick ( )
```

Stores the difference between the current time and the previous time.

5.15.2.6 TotalTime()

```
float FATime::Time::TotalTime ( ) const
```

Returns how much time has passed since [Reset\(\)](#) was called. Does not count any pause time.

The documentation for this class was generated from the following file:

- [FATime.h](#)

5.16 Time Class Reference

This class is used to get the time between each frame. You can stop start, reset and get the total time.

```
#include "FATime.h"
```

5.16.1 Detailed Description

This class is used to get the time between each frame. You can stop start, reset and get the total time.

The documentation for this class was generated from the following file:

- [FATime.h](#)

5.17 FAREnder::VertexBuffer Class Reference

This class stores vertices in a Direct3D 12 default buffer.

```
#include "FABuffer.h"
```

Public Member Functions

- **VertexBuffer** (const [VertexBuffer](#) &)=delete
- **VertexBuffer & operator=** (const [VertexBuffer](#) &)=delete
- void [CreateVertexBuffer](#) (const Microsoft::WRL::ComPtr< ID3D12Device > &device, const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > &commandList, const void *data, UINT numBytes)
Creates the vertex buffer and stores all of the specified vertices in the vertex buffer.
- void [CreateVertexBufferView](#) (UINT numBytes, UINT stride)
Creates the vertex buffer view and stores it.
- const D3D12_VERTEX_BUFFER_VIEW & [GetVertexBufferView](#) ()
Returns a constant reference to the vertex buffer view.

5.17.1 Detailed Description

This class stores vertices in a Direct3D 12 default buffer.

5.17.2 Member Function Documentation

5.17.2.1 CreateVertexBuffer()

```
void FARender::VertexBuffer::CreateVertexBuffer (
    const Microsoft::WRL::ComPtr< ID3D12Device > & device,
    const Microsoft::WRL::ComPtr< ID3D12GraphicsCommandList > & commandList,
    const void * data,
    UINT numBytes )
```

Creates the vertex buffer and stores all of the specified vertices in the vertex buffer.

5.17.2.2 CreateVertexBufferView()

```
void FARender::VertexBuffer::CreateVertexBufferView (
    UINT numBytes,
    UINT stride )
```

Creates the vertex buffer view and stores it.

5.17.2.3 GetVertexBufferView()

```
const D3D12_VERTEX_BUFFER_VIEW & FARender::VertexBuffer::GetVertexBufferView ( )
```

Returns a constant reference to the vertex buffer view.

The documentation for this class was generated from the following file:

- [FABuffer.h](#)

5.18 FAWindow::Window Class Reference

The window class is used to make a [Window](#) using Windows API.

```
#include "FAWindow.h"
```

Public Member Functions

- [Window](#) (const HINSTANCE &hInstance, const std::wstring &windowClassName, const std::wstring &windowName, WNDPROC winProcFunction, unsigned int width, unsigned int height, void *additionalData=nullptr)
Creates and displays a window. Registers a default window class with the OS with the specified instance, class name and window procedure.
- [Window](#) (const HINSTANCE &hInstance, const WNDCLASSEX &windowClass, const std::wstring &windowName, unsigned int width, unsigned int height, void *additionalData=nullptr)
Creates and displays a window. Registers the specified window class with the OS.
- HWND [GetWindowHandle](#) () const
Returns the window handle.
- unsigned int [GetWidth](#) () const
Returns the width of the window.
- unsigned int [GetHeight](#) () const
Returns the height of the window.
- void [SetWidth](#) (unsigned int width)
Sets the width of the window to the specified width.
- void [SetHeight](#) (unsigned int height)
Sets the height of the window to the specified height.

5.18.1 Detailed Description

The window class is used to make a [Window](#) using Windows API.

5.18.2 Constructor & Destructor Documentation

5.18.2.1 Window() [1/2]

```
FAWindow::Window::Window (
    const HINSTANCE & hInstance,
    const std::wstring & windowClassName,
    const std::wstring & windowName,
    WNDPROC winProcFunction,
    unsigned int width,
    unsigned int height,
    void * additionalData = nullptr )
```

Creates and displays a window. Registers a default window class with the OS with the specified instance, class name and window procedure.

5.18.2.2 Window() [2/2]

```
FAWindow::Window::Window (
    const HINSTANCE & hInstance,
    const WNDCLASSEX & windowClass,
    const std::wstring & windowName,
    unsigned int width,
    unsigned int height,
    void * additionalData = nullptr )
```

Creates and displays a window. Registers the specified window class with the OS.

5.18.3 Member Function Documentation

5.18.3.1 GetHeight()

```
unsigned int FAWindow::Window::GetHeight ( ) const
```

Returns the height of the window.

5.18.3.2 GetWidth()

```
unsigned int FAWindow::Window::GetWidth ( ) const
```

Returns the width of the window.

5.18.3.3 GetWindowHandle()

```
HWND FAWindow::Window::GetWindowHandle ( ) const
```

Returns the window handle.

5.18.3.4 SetHeight()

```
void FAWindow::Window::SetHeight (
    unsigned int height )
```

Sets the height of the window o the specified height.

5.18.3.5 SetWidth()

```
void FAWindow::Window::SetWidth (
    unsigned int width )
```

Sets the width of the window to the specified width.

The documentation for this class was generated from the following file:

- [FAWindow.h](#)

6.2 FABuffer.h File Reference

File has classes VertexBuffer, IndexBuffer and ConstantBuffer under namespace [FARender](#).

```
#include <wrl.h>
#include <d3d12.h>
```

Classes

- class [FARender::RenderTargetBuffer](#)
A wrapper for render target buffer resources. Uses DirectD 12 API.
- class [FARender::DepthStencilBuffer](#)
A wrapper for depth stencil buffer resources. Uses DirectD 12 API.
- class [FARender::VertexBuffer](#)
This class stores vertices in a Direct3D 12 default buffer.
- class [FARender::IndexBuffer](#)
This class stores indices in a Direct3D 12 default buffer.
- class [FARender::ConstantBuffer](#)
This class stores constant data in a Direct3D 12 upload buffer.

Namespaces

- namespace [FARender](#)
Has classes that are used for rendering objects and text through the Direct3D 12 API.

6.2.1 Detailed Description

File has classes VertexBuffer, IndexBuffer and ConstantBuffer under namespace [FARender](#).

```

6.4 FACamera.h File Reference

File that has namespace [FACamera](#). Withn the namespace is the class [Camera](#).

```

#include "FAMathEngine.h"
#include <Windows.h>

```

Classes

- class [FACamera::Camera](#)

Simple first person style camera class that lets the viewer explore the 3D scene.

It keeps track of the camera coordinate system relative to the world space so that the view matrix can be constructed.

It keeps track of the viewing frustum of the camera so that the projection matrix can be obtained.

.

Namespaces

- namespace [FACamera](#)
Has [Camera](#) class.

Typedefs

- typedef FAMath::Vector2D [vec2](#)
- typedef FAMath::Vector3D [vec3](#)

6.6 FAColor.h File Reference

File has class Color under namespace FAColor.

```
#include "FAMathEngine.h"
```

Classes

- class [FAColor::Color](#)

This class stores a RGBA color in a 4D vector using floats. The range of each component is [0.0, 1.0]. The first componet is red, second component is green, third component is blue and the 4th component is alpha.

Functions

- Color [FAColor::operator+](#) (const Color &c1, const Color &c2)
Returns the result of $c1 + c2$. Does component-wise addition. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.
- Color [FAColor::operator-](#) (const Color &c1, const Color &c2)
Returns the result of $c1 - c2$. Does component-wise subtraction. If any of the resultant components are $< 0.0f$, they are set to $0.0f$.
- Color [FAColor::operator*](#) (const Color &c, float k)
*Returns the result of $c * k$. If $k < 0.0f$, no multiplication happens and [Color](#) c is returned. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.*
- Color [FAColor::operator*](#) (float k, const Color &c)
*Returns the result of $k * c$. If $k < 0.0f$, no multiplication happens and [Color](#) c is returned. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.*
- Color [FAColor::operator*](#) (const Color &c1, const Color &c2)
*Returns the result of $c1 * c2$. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.*

6.6.1 Detailed Description

File has class Color under namespace FAColor.

6.6.2 Function Documentation

6.6.2.1 operator*() [1/3]

```
Color FColor::operator* (
    const Color & c,
    float k )
```

Returns the result of $c * k$. If $k < 0.0f$, no multiplication happens and Color c is returned. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.

.

6.6.2.2 operator*() [2/3]

```
Color FColor::operator* (
    const Color & c1,
    const Color & c2 )
```

Returns the result of $c1 * c2$. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.

.

6.6.2.3 operator*() [3/3]

```
Color FColor::operator* (
    float k,
    const Color & c )
```

Returns the result of $k * c$. If $k < 0.0f$, no multiplication happens and Color c is returned. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.

.

6.6.2.4 operator+()

```
Color FColor::operator+ (
    const Color & c1,
    const Color & c2 )
```

Returns the result of $c1 + c2$. Does component-wise addition. If any of the resultant components are $> 1.0f$, they are set to $1.0f$.

6.6.2.5 operator-()

```
Color FColor::operator- (
    const Color & c1,
    const Color & c2 )
```

Returns the result of $c1 - c2$. Does component-wise subtraction. If any of the resultant components are $< 0.0f$, they are set to $0.0f$.

#include "FAShapesUtility.h"

```

Classes

- struct `FARender::DrawSettings`
Holds a array of objects that use the same PSO, root signature and primitive.
- class `FARender::RenderScene`
This class is used to render a scene using Direct3D 12 API.

Namespaces

- namespace `FARender`
Has classes that are used for rendering objects and text through the Direct3D 12 API.

6.12.1 Detailed Description

File has class `RenderScene` under namespace `FARender`.

6.13 FARenderScene.h
